PRODUCER BULLETIN — Regulatory Update

Distributed with September 2024 invoices.

Subject: Revision to 9 CFR Part 78 — brucellosis test validity

Effective: September 1, 2024

Producers shipping sexually intact cattle interstate should be aware that the United States Department of Agriculture has revised 9 CFR Part 78 to shorten the validity window of an official negative brucellosis test. The new rule, as published in the Federal Register, requires that the test be drawn within thirty (30) days inclusive of the date of draw of the date of interstate movement. Producers familiar with the previous rule should note that this is a calendar count beginning on the date the blood is pulled, not a count of subsequent days. The clinic recommends reviewing any pending interstate consignment against the date on the corresponding panel.

On-farm CFT testing through the State Veterinary Diagnostic Lab is available with same-day turnaround when scheduled at least 24 hours in advance. Standard farm-call and per-head fees apply.

Questions should be directed to the clinic at the number above. The full text of the revised rule is available from APHIS and the Wisconsin DATCP.
