

Autumn 2026 Collection Procurement Forecast

Generated: June 9, 2026 | Target Scope: Procurement Logistics Run

Authoritative Input Synchronizations: Supply schedule timelines derived via *supplier_shipment_tracker.csv* (Post-SM-01 Sync State). Packaging container parameters derived via *Autumn_Collection_Spec_Sheet_v2_REVISED.pdf*.

Supply Arrival Log Adjustment: Active logistics tracks confirm that bulk organic elderberry components have shifted from their stale `D+1` target, locking into an updated arrival date of **December 12, 2026 (`D+3`)**. Containers are confirmed under the v2 specification: **"amber glass 4 oz with tamper-evident cap"**.

Five Critical Downstream Impact Vectors

- Downstream Impact — Readiness Timeline:** The 48-hour delay shifts the final batch validation target out, compacting the window between macro fluid fill-offs and market box staging.
- Downstream Impact — Packaging Calibration:** The move to a 4 oz footprint expands the required physical displacement map on drying racks by 50%, altering filling machinery clean-down intervals.
- Downstream Impact — Fulfillment Syncing:** Digital pre-orders on the WooCommerce backend must adjust delivery windows to account for the modified bottling turnaround.
- Downstream Impact — Market Inventory Allocation:** Crate weight limits for the Main Street Saturday Market transport must be re-tallied based on the heavier 4 oz glassware units.
- Downstream Impact — Production Operations:** Apprentice maceration logging routines on the Asana board must be rescheduled to hold until raw components clear terminal intake.
