

Autumn Collection Reconciliation Report — Elderberry Syrup

Keystone

Audit Sync: June 9, 2026 | Reference Document: Autumn_Collection_Procurement_Forecast.pdf

This reconciliation matrix evaluates operational alignment for our primary keystone element (Elderberry Syrup) across five distinct database frameworks to clear manufacturing loop errors.

1. Cross-Source Database Mapping

System / Modality	Target Metrics Stated	Status / Discrepancy Contradictions
Airtable Master Base	80 units target count allocation	Aligned with launch blueprint specifications
WooCommerce Storefront	80 units staging cap volume	Aligned with backend distribution grids
Supplier Tracking CSV	LOT-2026-E01 (In Transit / Delayed)	CONTRADICTION: Shows date shift to `D+3` relative to forecast logs.
Thornfield Invoices (PDF)	PO-2026-7740 (150 lbs organic elderberry)	Raw poundage sufficient for processing requirements
Procurement Forecast (PDF)	4 oz amber glass unit specifications	Aligned with revised container footprint updates

2. Active Discrepancies Still Requiring Correction

- **Error Ref ERR-04:** Thornfield Invoice INV-2026-8941 references an original 2 oz continuous thread closure model, contradicting the updated tamper-evident dropper assembly logged in our *Autumn_Collection_Procurement_Forecast.pdf*. A parts credit adjustment must be processed prior to closing the quarter bookkeeping loop.
